PREFACE

The present work continues Bibliography of Military Psychiatry, 1947 - 1952, published by the Armed Forces Medical Library in 1953. It supersedes References on Military Psychiatry, 1952 - 1955, issued by the Library in 1956.

Although intensive search for entries ceased with the 1958 literature, a few selected references for the early months of 1959 have been included. With the exception of Section 3 A, only articles directly related to the military situation or involving military personnel have been included. Occasional annotations have been added to entries.

Major James J. Gibbs, MC, Office of the Chief Psychiatry and Neurology Consultant, Office of The Surgeon General, U. S. Army, acted as consultant to the project.

INTRODUCTION

This continuation of the Bibliography of Military Psychiatry has a revised table of contents since military psychiatry has in recent years encompassed new areas of interest and employed new methods of operation as necessitated by the changing social scene and concepts of modern warfare. For these reasons the broad realm of social and preventive psychiatry merits a separate heading and includes many previously isolated subjects of interest, all pertaining to the individual's adaptation to his environment and the influence of the group on his behavior. Manpower utilization and forensic psychiatry remain notable topics of investigation. The problems of situational stress in light of new and greater weapons of destruction must be viewed with greater solemnity, and the psychological aspects of disaster and nuclear warfare are of increasing relevance. Since the Korean War, behavior under prisoner of war conditions continues to be a major concern. Other categories continue to be subjects of perennial interest.

The bibliography continues the tradition of providing a much-needed reference source for those interested workers in psychiatry who have the responsibility of maintaining the effectiveness of our fighting forces.

ALBERT J. GLASS, Colonel, MC
Chief Psychiatry and Neurology Consultant
Office of The Surgeon General, Dept. of Army
Washington, D. C.
